inner-grid instances

KEY FINDING for nz/en:
FALSE POSITIVE inner-grids (cols-12 single-column width-constraint): 16 instances across 13 pages. These are generated where an AEM container with a width styled wraps content inside a single-column grid cell. The converter emits `inner-grid {cols-12, width-*}` but the EDS twin simply applies the width class on the `grid-section` without any inner-grid. A `cols-12` inner-grid is semantically a no-op for layout — it's just a width constraint.
LEGITIMATE inner-grids (multi-column, e.g. cols-6-6, cols-8-2-2): 10 instances — these are correct and should be kept.

Inner-Grid Class Pattern Frequency (FP = cols-12 false positives)

#	cols class	Total instances	False Positive (cols-12)	Legitimate	Assessment
1	cols-12	16	16	0	⚠ FALSE POSITIVE — single-column width-constraint. Use grid-section widthClass instead.
2	cols-6-6	5	0	5	✓ Multi-column — legitimate inner-grid use.
3	cols-8-2-2	3	0	3	✓ Multi-column — legitimate inner-grid use.
4	cols-6-1-5	1	0	1	✓ Multi-column — legitimate inner-grid use.
5	cols-2-10	1	0	1	✓ Multi-column — legitimate inner-grid use.

⚠ FALSE_POSITIVE + OVER_INNER_GRID pages (first 50 of 13)

Red rows = FALSE_POSITIVE Orange rows = OVER_INNER_GRID underlined code = false positive instance green code = legitimate

Fix Guide for aem-canvas.js

Broken path	Trigger	Correct output	Guard logic
collectCellLeaves() S3	container-* inside parsys cell with any grid	If resolved cols = cols-12 → emit as normal grid-section with widthClass prop. If cols ≠ cols-12 → keep inner-grid (legit multi-col).	if (resolvedCols === 'cols-12') { parentGridSection.props.widthClass = wc; return; }
emitNode() S1	Top-level container-* with any nested grid	Check if inner grid is truly multi-column. If cols-12, emit as grid-container with width on props.	if (!isMultiColGrid(node)) return emitAsGridContainer(node, widthClass);
Hero continuation body S4	Body container with container-* + single-col grid	Same — if grid is single-column, skip inner-grid and apply width class to the grid-section.	Same guard as S3.
