

us/en inner-grid Deep Audit — AEM → EDS 1:1 Mapping

Generated: 2026-08-05T13:08:04.463Z | Pages analysed: 316 us/en pages | Source: aemToCanvas() vs EDS twin XML | Tool: _deep-inner-grid-audit.js

KEY FINDING — Confirmed over-exploitation of inner-grid:
130 out of 158 pages (82%) that generate inner-grid do NOT have it in the EDS twin. The twin uses a regular `grid-container` / `grid-section` instead.

Root cause: When an AEM author puts a `container-large` (or any `container-*` width styleld) inside a grid cell parsys to constrain the text reading width, `aem-canvas.js` detects `containerHasWidthStyle()` + `containerHasAnyGrid()` and emits an `inner-grid {cols-12, width-large}` controller. But the EDS hand-crafted twin simply applies the width constraint directly on the enclosing `grid-section` — no inner-grid is created. This pattern dominates story pages (74 of 96 story pages affected).

The `cols-12,width-large` pattern is a single-column, full-row width-constraint — not a true multi-column inner layout. A `cols-12` inner-grid with one column is semantically equivalent to setting a width class on the grid-section itself.

Top Inner-Grid Class Patterns in Over-Exploitation Cases

#	inner-grid classes (cols + width)	Occurrences	Assessment
1	cols-12,width-large	360	⚠ Most common. Container-large inside grid cell → EDS twin simply uses grid-container + width class on grid-section. No inner-grid needed.
2	cols-12,width-xx-large	8	⚠ Single-column inner-grid triggered by width-style container inside parsys cell.
3	cols-6-6	7	✓ Legitimate 2-col split inside a section/grid-section.
4	cols-8-2-2	3	✓ Asymmetric layout — may be valid inner-grid or gutter pattern.
5	cols-12,width-x-large	2	⚠ Single-column inner-grid triggered by width-style container inside parsys cell.
6	cols-5-1-5-1	2	✓ Asymmetric layout — may be valid inner-grid or gutter pattern.
7	cols-12,width-medium	1	⚠ Single-column inner-grid triggered by width-style container inside parsys cell.
8	cols-10-2	1	Review individually.
9	cols-11-1	1	Review individually.
10	cols-5-1-6	1	✓ Asymmetric layout — may be valid inner-grid or gutter pattern.

⚠ OVER_INNER_GRID — Generated inner-grid but twin uses grid-container (first 40 of 130)

Recommendations — When to Use inner-grid vs grid-container

✓ Use inner-grid ONLY for these cases:

Pattern	Trigger condition	Example classes
True multi-column layout inside a grid cell	Grid inside a parsys cell (par_RC) where columns ≥ 2 and widths are non-trivial (not cols-12)	cols-6-6 , cols-8-2-2 , cols-5-1-5-1
Asymmetric nested layout	par_RC contains a grid with mixed column widths creating a visual side-by-side layout	cols-10-2 , cols-5-1-6
Contact-us / migraine-friendly pattern	Hero continuation body with width-style container + real multi-col grid	cols-12,width-medium with col-1 and actual 2+ blocks

✗ Do NOT use inner-grid for these cases (use grid-container instead):

Pattern	Current trigger (incorrect)	Correct EDS output
Width-constraint on a single grid column container-large wrapping all content inside a cols-12 or single parsys cell	containerHasWidthStyle() + containerHasAnyGrid() fires even when it's a cols-12 single column	Apply width-large class directly to the parent grid-section — no inner-grid needed
Story page text/image layout Article body paragraphs in a container-large inside a single-column grid	Every section of a story article generates a new inner-grid {cols-12,width-large}	Single grid-container with grid-section {width-large} blocks. EDS twin confirmed: 1 grid-container per article, 0 inner-grids
Top-level width-container with a grid that maps directly to EDS grid-container	Scenario 1: top-level container has width-styleId + grid → emitNode() fires inner-grid path	If the inner grid has multi-column layout, it should be a grid-container + grid-section with the width class on the container props

Proposed fix in aem-canvas.js:

Location	Current behaviour	Proposed change
collectCellLeaves() — Scenario 3	Any container-* with containerHasWidthStyle() inside a parsys cell → emits inner-grid {cols-12, widthClass}	Only emit inner-grid when the container's grid has more than 1 column OR the grid width is not cols-12 . If grid is single-column (cols-12), propagate the width class to the enclosing grid-section instead.
emitNode() — Scenario 1	Top-level container-* with any grid → always routes to collectCellLeaves() (inner-grid path)	Check whether the inner grid is multi-column. If single-column only, route to normal grid-container path with width class on props instead.
